General Structure of the Course

- officially, each weekly 3h slot is divided into 1,5h of lecture and 1,5h of exercise
- practically, it will be a bit different
  - 1st part (until christmas holidays): each slot will be 2h-2,5h of lecture, with the rest being used by you to either work on exercise or me to present parts of the previous exercises
  - 2nd part (after new years): slot will be exercises only, with one optional lecture (optional, as in not relevant for the exam)

Building Blocks

lecture

- theory
- me presenting
- fundamentals for hacking

live demos

- me live hacking with commentary and Q&A
- to get a feel about what the thought-process is

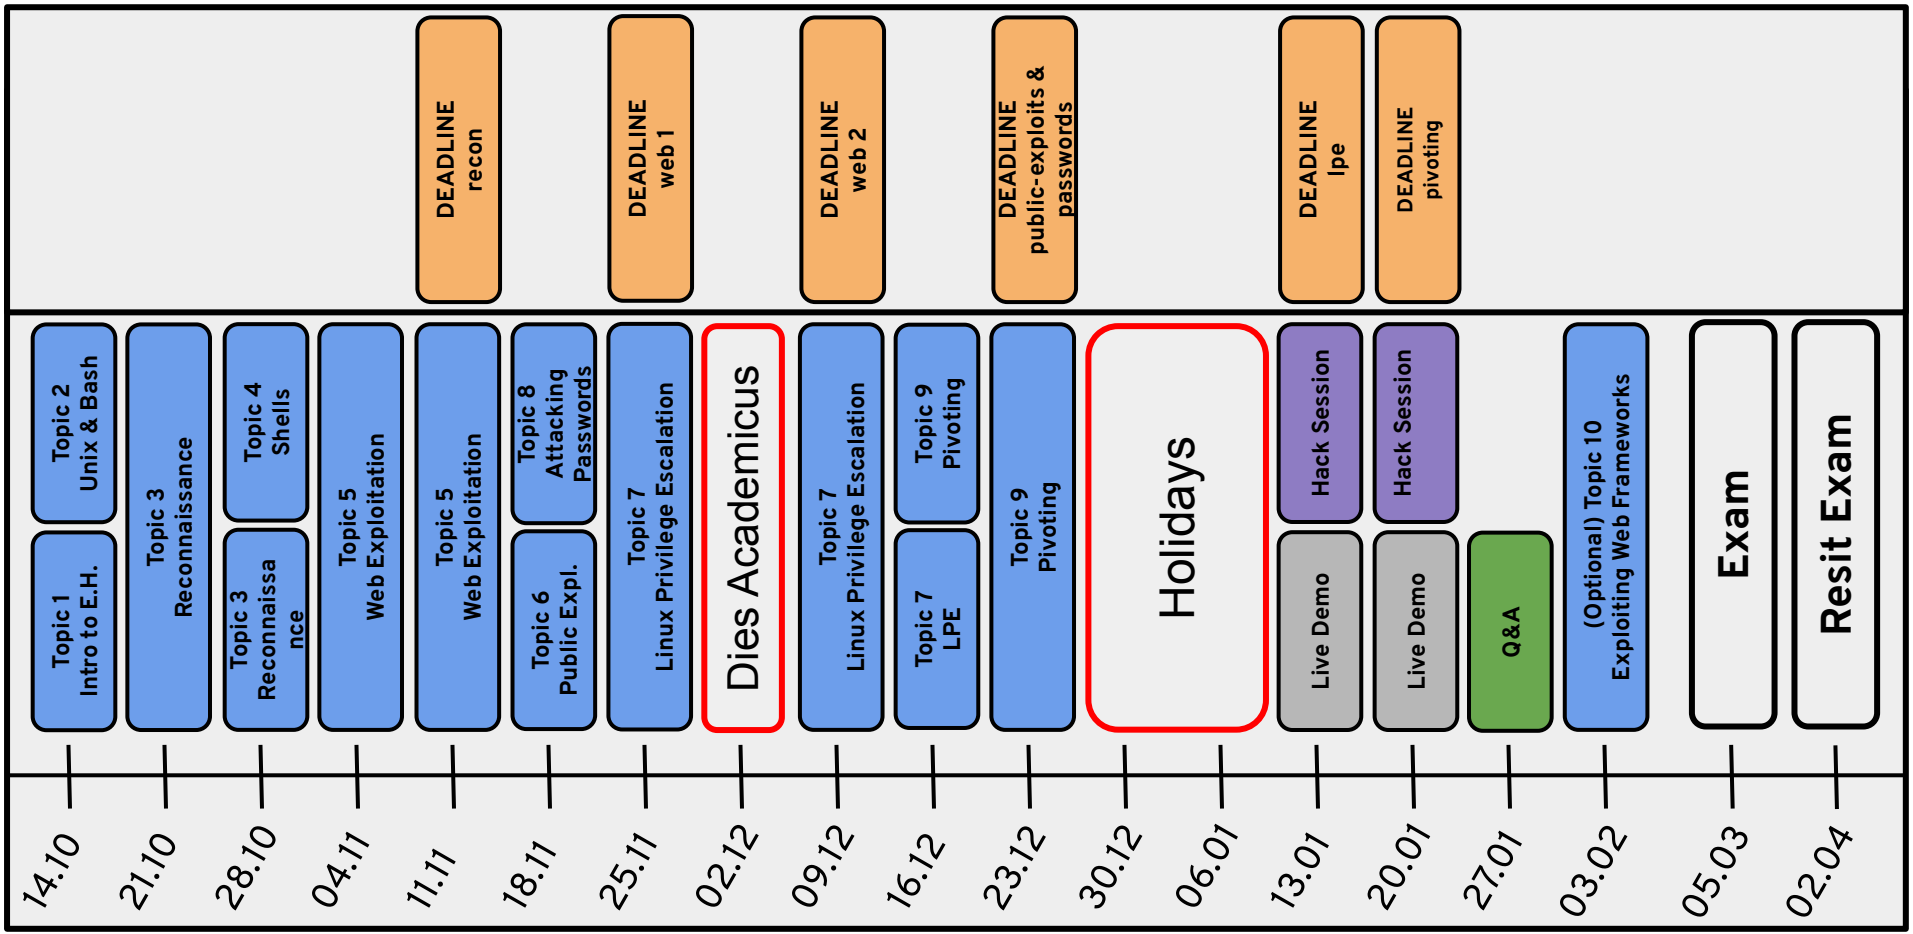

labs

- exercise to apply theory
- designed to help you actually understand how to exploit vulnerabilities
- required for exam admission

hack sessions

- time during lecture time slots to work on the labs
- i will be there for any questions you may have

Exam Admission

- to take the exam for this course, you will have to acquire exam admission
- a total of 8 labs are available to you
  - first lab is an introductory lab for honing you Bash skills
  - last lab belongs to the optional lecture at the end of course, thus is also not exam relevant
  - Information on how the labs are set upsee course website for more concrete information here
- from the remaining six labs, you will have to do five
  - as proof of completion, the deliverable is a write-up
    - regarding what you have to exactly do and submit, more information will follow
    - deadline for each lab is three weeks after its topic's lecture slot
  - the exact dates and rules regarding submissions can be found here

Weekly Tutor Session

- timeslot for the weekly tutor session will be decided until next week's lecture
- please vote and enter you availabilities

Exam

- hand written
- 100% of the course grade
- dates
  - 1st exam: 05.03.2027, 12:00-15:00
  - 2nd exam: 02.04.2027, 12:00-15:00
- combination of
  - multiple choice
  - open questions
  - multi-step exploit riddles
- will test
  - understanding of presented theory
  - exploiting-skills you learned about in the labs and boxes
- exam grades will be standardized based on the class's performance
